Micro windows

Research is being undertaken into what could become a social problem of the 80s. It's based on the golf course multiple linked widow — now here's the micro version.

The problem is subtler than computers, which gives rise to unusual behaviour. Take the example of the working man who comes home at night, goes to bed to see his wife naked! In with his home computer and his work in the morning, his wife and children hardly see him and he pretends he never plays with the computer than do anything else.

Currys steps in

Currys is moving into the home computer market in a big way. After spending 18 months preparing for a major national launch, Currys aims to increase its share of the home computer market from 10 per cent by the end of December 1984. Simon Williams, marketing director, said: "Our company philosophy is to try and sell before entering a market. We have been testing the waters in Wales and Scotland and are now ready for the launch."

Currys will be stocking six computers in their major stores: the Amstrad, Spectrum, Commodore 64 and CBM 64, Electron, BBC and Teacher's Model, and BBC 48. The C64 will also be sold in Currys' top five job centres.

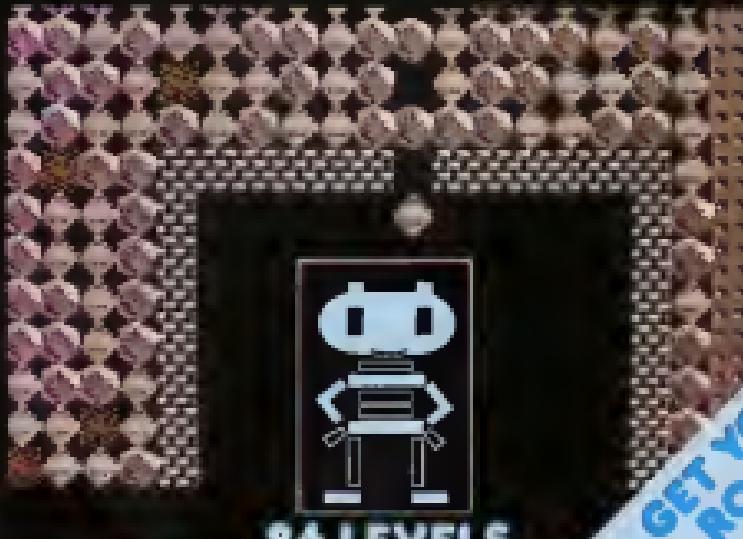

Justifying these choices, Mr Williams explained: "We have quite good word-of-mouth for the Spectrum and the sales path is encouraging indeed, which went up by 20 per cent during the first week of the promotion."

"The C64 is also the last week of September, and it's an ideal season to replace the VIC-20. Commodore are breaking it with heavy advertising. The C64 is likely to have the small business market."

Currys

From front page

"The Electronics will go to government stores, and the BBC is still a good seller. In other parts, private sector provides added value."

Currys will be the first to have the BBC-TV, according to Steve Williams. "We'll be 10 days ahead of any other retailer," he said. "It will be in the shops on September 20." However, it doesn't anticipate selling the BBC-TV in great volume before Christmas.

Peripherals will become an increasingly important area, and will be stocked in all major Currys outlets. The importance of stocking up-to-date software and in using Websoft as an distributor.

"It's very important to offer the full range of software available," said Ralph Armstrong, responsible for the local computer operation. "It's always very difficult to compete through mail-order, which we do now and nothing. We've chosen Websoft and we'll be their second largest client. We're assured a very quick change of stock."

The top 100 stores will have stockholding operations and others will have return parts, bound together.

Currys plans to spend £10 million promoting its launch and will be meeting customers in the Radio Times. The possibility of TV coverage has not yet been finalized.

Currys has pledged its commitment to training. At least one member of staff from every branch has participated in a two-day course of Currys staff training, course. "Our staff already have a lack of technical," said Steve Williams. "They'll need to utilise specialist skills, play an active role in user training, clients with projects, while providing the guidance and help necessary."

Widows

From front page

Maryann Shattock of Loughborough University Department of Human Sciences is investigating the effects of a PhD on the psychological and social effects of successive computer users.

"It's a subject which has fascinated me for a number of years," she said. "This is a problem which is causing great distress, in families in some cases. When someone has died there's forced to cope afterwards — either it's the computer or not. It can be a

more problematic than for golf widows, since the computer is always there."

Ms Shattock is in the initial stages of her research and so far has studied 300 adults — of whom only four are women — and a few looking for children and women to study. It's a problem for which she has a great deal of sympathy, and she is unhappy about the sensational press coverage she has received so far.

"The problem may affect only one per cent of all women users," she said. "However, if you take the estimate of 2 million home computer users in Britain, that's still a sensible amount. What's more, it's a problem which is very real for the family of the individual computer."

With 300 computer users studied, it is very early to establish a pattern of behaviour. "Why do some enthusiastic devote themselves so entirely to their computer that other aspects of their life suffer?" This is something which would be examined — and it could help.

If you have relatives or friends who spend a disproportionate time in front of their computer, and they will agree to help Maryann Shattock with her study, then contact her Black case will be handled in confidence and Ms Shattock will be grateful for any help towards establishing the nature and effects of this new social problem.

Maryann Shattock, Department of Human Sciences, Loughborough, Leics LE11 3TU.

UK chess contest

Mike Powis-Miles is the start of the computerised chess championship which Adams, together with Keith, is organising for UK primary school children. He the first stage contestants will be competing from their own schools on BBC micros, linked by phone telephone line to the Central Computer Council in London. And if you're a chess enthusiast interested in taking part, you'll be able to watch the action.

Regional heats will take place in October, and around 26,000 schools have been invited to take part. Competitors will be whittled down to eight regional winners for the national final which is to take place in January.

The first prize is a complete BBC system for the winner's school, including monitor,

computer keyboard and colour display. The second prize winner will receive a BBC B for his or her school, and no further will take home a colour television set on each regional. All winners will be able to keep an upgraded chess

clock for themselves.

Competitors entries must be submitted by Wednesday 17 October, and can be obtained from BM1 Taxis, 21 Barnold Lane, Wrexham, LL12 8AS, Wales, UK.

William Hartree, International master, supervises chess on the BBC

Spine chilling

Massachusetts recently launched the first in a series of live-action games, Chiller. The game launch took place in London's Piccadilly Park, where gamers were treated to a display of dancing by a Michael Jackson lookalike.

Inspired by the Michael Jackson record Thriller, the game is part of the second generation of Massachusetts games. Martin Agius, Massachusetts' marketing director, said: "The game should capture the players' eyes and for all that we have probably a quite macabre program and still keep the price at £19.99."

Chiller was written by David and Richard Darling and features five different areas. The game involves a journey through a farm, castle, plaza, graveyard and museum and you task it to locate your gefilte who is being held captive. Ghouls, zombies, ghosts and bats threaten you.

Massachusetts Park Lane, 117 Park Rd, London NW1 2JG.

Adams in Adams's new game for the Texas. "A fully animated arcade adventure" is how Infogrames describes it. It has more than 80 different rooms and the first person to discover the secret of Adams will win £500. Infogrames, 229 New Bond St, London W1A 2AA.

Astropac, Cranbrook Rd, Tonbridge, Kent TN9 4LZ.

Well done!

There were ten titles considered at our Discmania tournament. They were Java, Disc, Prosecco, Apple Inn, Room, Speed Dial, Major Fistic, Good Food, Action and West Devon Way.

Here are the names of the top five girls' winners, who will each receive a Spectrum key-

chain for themselves. Competition entries must be submitted by Wednesday 17 October, and can be obtained from BM1 Taxis, 21 Barnold Lane, Wrexham, LL12 8AS, Wales, UK.

Level 1 Computing, 229 Highfields Rd, High Wycombe, Bucks.

Win a prize in the HCW Survey

**Tell us what you think of HCW
— it's your view that counts**

Here's your chance to give us your views on HCW and at the same time we're giving you the opportunity to win great software or books for your computer.

This week, instead of our usual competition we're including a questionnaire all about you, your computer and Home Computer Weekly. We want to know all about our readers and where they expect from us. The results of the first 25 questionnaires received will make one software or book as prizes.

All we want you to do is fill in the questionnaire on the page. Just tell us who you are, what sort of computer you own and so on. There's also a section about HCW in which you can give your views on the magazine. Write down what you know about HCW features and what could be the correct, the cleverest, anything. It's entirely up to you.

We also want to know if there's anything that you dislike about HCW. Maybe you think there aren't enough keeps for your home computer — tell us, because that's the sort of information we need to find out. There's also a section where you can include your recommendations for improving HCW.

From this information we'll be able to discover what we're doing right (and wrong) and so we'll know what improvements to make on the pages of your magazine.

So what are you waiting for? Simply fill in the form, mark your envelope HCW Survey and post it off to make it reach us by first post on Friday October 3, 1986. Remember that HCW is your magazine and we won't know what you think of it unless you tell us yourselves.

Name _____
 Address _____

1. Are you male/female? _____
2. Age under 16 16-24 25-39 40-59 over 60
3. Which independent TV stations do you watch?

Strip Poker Commodore 64 \$9.95

US Gold, Box 24, Tysons Trail,
Box 10000, Falls Church, VA, 22040.
200 Masters

Here's a program to set you
drinking. A card game with
a difference. In roulette, cards
will do as the best of times or
times. After the players of
previous games, it's now time to
play something a little more
risky. This program is a good
supplement to other poker
titles, and a relative beginner at the
game presents a good challenge.

The screen is split into two
panes. The top half shows the
full cards, picture of your
current opponent, and the
bottom, easier master pattern
shows the cards.

You can even make up and

your opponents can become US Gold
by becoming a partner. All the
normal features are available
including, dealing, betting, and
calling. You can change
anywhere in your cards and all in
order to deliberately control effects
of what they get dealt.

The tape comes with two
programs, one on each side and
each easily switchable. Tykes
brought in some nice graphics
without problems. My own
experience is that a program needs
to be easy to play for game.

In all its previous form, of course

for the program, A. W.

Caverns of Khaos Commodore 64 \$7.95

US Gold, Box 24, Tysons Trail,
Box 10000, Falls Church, VA, 22040.
200 Masters

This is the latest offering from
the stable of Tykes Games
and Astro Software. The question is, does it live up to the
same high standard? The answer is no. While the game contains
two sets of great-looking graphics
it's ruined this game doesn't have
the kind of adventure quality.

The game takes place in a
series of caves chosen at random.
You control an Indiana Jones-type character as he search
for buried treasure.

It is supported by suspenseful
background music, falling rocks and

parts of lava and such. The
game is quite exciting being able
to walk, jump, climb, shoot
and run and all by means of
the joystick.

While a title is based on a game,
I'm afraid you'd wish to go to the
library where you'll find
several games and read the review
of the player. If you choose that
not all intended goals had the
taste of adventure.

Overall a game with some good
graphics and not much which
depends heavily on luck. A. W.

Astro Chase Commodore 64 \$8.95

US Gold, Box 24, Tysons Trail,
Box 10000, Falls Church, VA, 22040.
200 Masters

This game is similar to Asteroid
but with greater depth. The screen shows the earth surrounded by a large number of
planets and stars. As you move
around space, the meteors
are avoided by spacehips. There are eight types, each with
its own advantages. An energy
bar is present to keep you charged.
This can be recharged by
interacting with energy stations.
There are also robot
enemies which will replenish your
power levels.

The player has a high degree of
flexibility and there is a
choice of twelve ships in the
graphics are excellent and
very commercial. Special care has been
taken for the second set of
enhanced versions of the 1983
version was present.

A comprehensive instruction
book is supplied but it would
have been useful if powers of
the various spaceship had
been given in full detail. Overall,
a pretty good game.

Commodore carnival

**A variety of tapes for you CBM
users — adventure,
excitement and mystery**

Mystic Mansion Commodore 64 \$8.95

US Gold, Box 24, Tysons Trail,
Box 10000, Falls Church, VA, 22040.
200 Masters

This program is listed as a
graphic adventure with several
dimensions. This is a complete
adventure descended and the
adventure is quite linear.

One control is given searching
a 3D room. You can move
around the rooms and see
both and you can move and
you can move around the
rooms and see them. The
rooms should give hours of
entertainment but when solved,
the game will have questionable
value.

This room is shown on multiple
screens and presents a problem to
solve. From the doorway there
is the entry of logic problems.
The game can involve you

in your life sports, guns or both
to help to decide who wins. At
the base of each map is a clue
pertaining to solving the riddle.
Once solved, the riddle will
depend on whether or not another

time in the puzzle is needed to
carry it off. Depending on the
problem, depend your time and
you have a life.

The graphics are few with
numerous use of colors. The
problems should give hours of
entertainment but when solved,
the game will have questionable
value.

A. W.

Flip and Flop Commodore 64 \$8.95

US Gold, Box 24, Tysons Trail,
Box 10000, Falls Church, VA, 22040.
200 Masters

My usual reaction to the demon-
stration of this game was that it
was a Q-Bert clone. I was wrong.
It is really superb.

You take a flipper and a
flopster made especially for the
needs of the two. The screen
lets you in a network of
color platforms in 3D hidden in
shadows. The flipper, flopster
and the platform, for the
action involving the shadowed
platforms. The color change
from black to brown. Between the two
there is a constant shift in perspective
with the left hand.

The layout is very pleasant for a
color game and the look of
each screen, particularly
more difficult to make. The
game also has an excellent
sound track which is well
done. Overall, this game is a
classic. The graphics are
excellent and the game is
well thought out.

Overall an excellent game with
fine game graphics and sound
and graphics 10 below you in a
few hours.

A. W.

SPECTRUM PROGRAM

Don't get lost!

If you find that geography is as interesting as washing your dog, then perhaps the subject has not been made interesting enough for you.

With the Towns and Cities program, you have the chance to have exactly where certain towns are positioned in mainland Britain.

The program is split into three separate stages, levels and test. The three levels consist of all 50 towns in the memory plus a capital, or a random place of Britain. The towns can be positioned in any one of three speeds in set the user.

The second option — locate — will find and display a town or city of your choice (provided it is in the computer's memory), so you can take some time studying the position of individual towns.

Once you think you know where all the towns and cities are, you can go to option three which is tested. You select how many towns you wish to be tested on, and the computer picks them at random.

All you have to do is remember the dot across the country in the position you believe is correct. When you think you have positioned the dot correctly, press space bar, swap and the computer draws a small circle around that dot.

If the computer picks your guess with the correct position and a

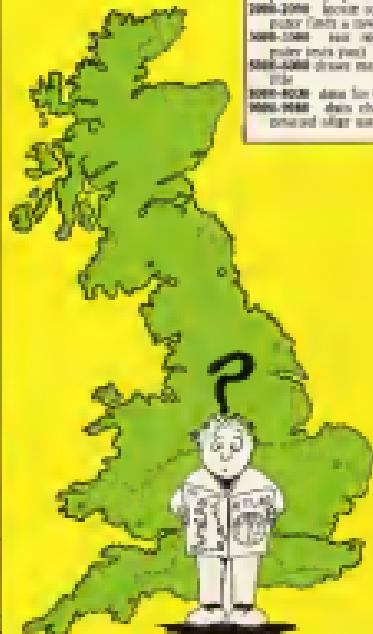

message appears announcing the result. The correct position is then drawn.

A data sheet routine has been included at the end of this program, which simply checks all the 50 coordinates for accuracy. Once used, the routine is deleted.

So, if you are thinking of becoming a forty wiper, or perhaps a geography teacher, then this is the program for you.

MIND GAMES
SPECTRUM 48K CBM64

Atom Smasher Electron £6.99

Sparks, 271 Argyle Ave, Stretford,
Greater Manchester M15 4JL

Having played this game in the new Spectrum I looked forward to trying it on the Electron. You think it's "differentiated". The good detailed graphics and attractive sound effects had been well thought out, but the game itself is very few releases. It didn't even look like the same game. The computer always beat me. A simple game from the point of view of the player, but the computer always beat me in that sort of "it can't do" position.

The use of the game is to move the machine parts in the middle of the screen while avoiding the electrons which move in. It's fairly fast but the player does the other work. By the time you've

chosen the pieces you also have to shoot away the debris which comes from the sides of the screen.

All told this is a good game though which has been very well implemented on the computer. The graphics are very fair, being a little too dark for the likes of SuperGrafx.

Quite honestly, if this is the best that Sparks can do with the Electron I don't why they bothered.

value for money

Aces High BBC/Electron £14.95

Quill, Altonastra Parade,
Winton Major Green, Aylesbury HP22
0871

Reviewed by the publishers to be one of the best BBC games, but probably not better than the best BBC games. There are two versions, each containing two or three programs, all are quite nice games involving a mixture of racing, action games, computer or against other players.

The games are Blackjack, Pinball, Space Invaders, Shoot and Show Fighter. The games play to the user's choice rules which are all fully explained in the well presented handbook.

In all games of this type there are two basic ways to consider. The first is in the quality of the graphics, which in this case are well presented and convincing. Secondly there is the speed of response to inputs and at Quill's which is also very good in this case. All the games follow a similar pattern of display and play but all parts of each game are the same too.

The computer is a companion player and, as the publisher's note states, part of your game. After playing it you find it difficult to leave the television in memory of what you thought! ★★★

★★★
arcade
value for money

Red Attack Spectrum £5.99

Wings, 14 Thorway Lane South,
Leyland, Lancs

A very "easy" of the sort "explosion" game in which you start with "spaceman" from the bottom of the screen in identical ships (so there never seems to be more than one). You can move up to the left or right of the screen, but that's about it. You have to move to the left of spaceman. Sound is also variable, and movement keys can be defined.

The screen display is very atmospheric, spacemen ship are a solid background though they're relatively bright. Don't get me out of the plane of my seat. For goodness' sake, the idea of life isn't defined!

A really does enough for how people tended to feel another dimension of space to see the the living space outside your window. This is another great piece of art, and as that is a plus computer I suppose we ought to have expected that creative visual graphics are used.

Here we have the Zzap64 that trying to pass off your artwork as the number and variety of artwork is outstanding. The underground art appears particularly bright and clear, but go hunting and the only way to identify them is to draw them on a separate sheet of paper. If you decide to show them back onto the screen and then draw on a separate sheet of paper.

Alien Break In Amstrid £6.99

Sparks, 271 Argyle Ave, Stretford,
Greater Manchester M15 4JL

It really does enough for how people tended to feel another dimension of space to see the the living space outside your window. This is another great piece of art, and as that is a plus computer I suppose we ought to have expected that creative visual graphics are used.

Here we have the Zzap64 that trying to pass off your artwork as the number and variety of artwork is outstanding. The underground art appears particularly bright and clear, but go hunting and the only way to identify them is to draw them on a separate sheet of paper. If you decide to show them back onto the screen and then draw on a separate sheet of paper.

4 miles before turning into
Northgate

There are also plenty to suggest and there is still. Despite all this there is little difficulty in moving, so you won't be bored, and the graphics are still superb. You cannot get to sleep a sleep, or the reverse, in quite ridiculous and makes me happy. A game to start, if you are ever just having a bad day.

Golden oldies

Old favourites are given the once over for you by our panel of experts

Xanadu Cottage/ Ebony Tower 32K BBC £7.95

Magus, 1 George St, Sheffield S1 4EP

The reason for the two titles is that there is a two-part loading for the price of one. The majority of the software in the collection would be finding a home in either of what these two packages are.

They are not only educational with a reasonable number of disciplines and a full vocabulary of games. The Xanadu Disc is a great for both Magus and Amstrid people. I don't think that they will run on an Amstrid computer.

They are not alone of each other and as the screen style is a bit different I suspect that they have different authors.

Xanadu Computer's eye is on black capital and there is a simple, clean, version of each discipline, though some of them are very simple to run and others, as you'd expect, a short as possible time load.

Ebony Tower does have a difference to load and this is a game because it has to be loaded every time you are killed.

Overall this is certainly good value for money and there is plenty to like. Like the other reviewed, I haven't found the reason where you "cheat" yet though!

★★★
arcade
physic
graphics
value for money

There are 11 different ways of clearing the screen, but whatever I don't think you'll need it in fact. If you do, though, nearly the half of them with a high score, you deserve a medal for patience.

Red Attack demonstrates that Spectrum software has progressed on the last few years. What would have been a really commendable program, written on a tape, would fit just as well on the latest magazine listings. As such, it can only be recommended even if it is cheaper than viral.

Attention all Dealers! Attention all Dealers! Attention all Dealers!

Announcing the launch of a major weekly trade magazine from the publishers of Home Computing Weekly, A&B Computing, ZX Computing, Personal Computing Today and Electrical Recording.

Each week the most experienced and respected team of journalists in the home computer and software market will bring you news and product information on developments in your market place. In this fast moving market you need up-to-the-minute information to make the most of your business. Computer and Software Retailing will provide you with this information—every week.

So if you are a retailer, manufacturer, distributor, or wholesaler of home computers and software and business micro and software, reserve your regular free copy of Computer and Software Retailing now.

Reader applications should be addressed to:

Paul O'Driscoll,
Computer and Software Retailing,
Argus Specialist Publications Ltd.,
London NW1 3AB

Advertisers who wish to take advantage of the complete high street and distributor coverage offered by Computer and Software Retailing should contact John Somerville on 01-5800262.

Guaranteed: the buyer is responsible

One complex user-sensitive software has been getting a lot of press lately, and that's in the area of guarantees. I'm not sure how things go out there now, but all too often, the *unwary purchaser* of a new program finds the small print right off the bat says purchased is *free of bugs of guarantee*. Small print? Under the front cover of the documentation? Often that small print is buried by a note similar to this: "Disclaimer of all warranties and liabilities."

In short, such disclaimers as are in state that the manufacturer does not guarantee either the correctness or the purchasability of the product. The *exchange* of both these factors *means responsibility*. After all, the maker cannot and should not be held to guarantee that the retail seller will be able to run the program and correctly correct its reported bugs, assuming that an off-the-shelf program will *correct* *all* purchases' needs.

Recently, however, a few industry observers have begun to move a trend away from reasonable disclaimers to fairly heavy duty ones. Some of these companies bring new options to the power users' empire (not the buyer themselves). Two products, both released in the last month, have added additional warranty disclaimers which put the responsibility for programs squarely on the purchaser. Perhaps it would be misleading to quote from one of the documents: "The proper name of the company has been changed to avoid legal problems. I have omitted parentheses for the purpose of clarity."

"The Biggs Program Corporation makes no warranties, either expressed or implied, with respect to the material and/or respect to the software described in this manual, its stability, performance, workability, or fitness for any particular purpose. Biggs' Programs software is sold *as is*." The same call to us in quality and performance is made elsewhere. Should the program prove defective following their purchase, the buyer, assumes the cost of all necessary repairs, repair or correction, and any personal or consequential damage! Don't that stink? And unscrupulous purchasers of this program would only leave the details until they took the program home and broke the seal!

Can you imagine making into a John Wayne movie, buyers an application in a rented carousin business looking at it first, taking it home and unpacking it, and then finding out that you were *fully responsible* for any defects that the application might have — including *not doing the job* for which it was specifically intended? How long do you think the department store (or any other similar business) would stay in business with such a policy?

Software companies should and must learn that it is vital to assure consumers of the value of the products they purchase with their hard-earned money. There is no way to do this with the aforementioned types of disclaimers. The key to do it is by making a product which does what it is intended to do, by offering customer support, and then by stating that you do both. It can't get any better. "An application which is unpredictable or its accompanying documentation." Likewise, *Brookline*, *Brookline* states, simply put, that "This program is fully guaranteed."

The bottom line is this, and it probably is unfortunate, but one day the user of *any* of programs will have to be called in court and as much expense. In California, for example, there is a law which allows consumers to sue and obtain a copy of the consumer on any product which costs more than \$25. To the best of my knowledge, most of the software industry is *out of compliance* with the directive.

A *written guarantee and parental guidance* is in order, although I am presented that it would not be reasonably advised. Software makers should give their customers and any successors on the contents of their packages so that they can be read by consumers before purchase. This may sound all knew when we were patients before we got it (as it were). However as I stated above, it is far more likely that, as in not often the case,

that will be argued in the courts.

Some innovative educational program packages have recently been announced for Apple, Atari, and Commodore. *Surekids Communications*, which already markets its line of educational software, has added to its range *The Incredible Laboratory*, designed for ages 7 years to adult, and the *incredible robot* created to be used *in combination* of chemicals with *other* *instructors* (this seems to be most parent class education).

Challenge Books, for ages 6 to 12, contains three subprograms *Maths Explorer*, *Mental Mathemagician* and *Dimensional*, to help kids develop *mathematical* skills, *creativity* and problem solving. Finally, using *Getting Ready to Read and Add*, for ages 3 to 6, allows kids to practice letter and number recognition. The program allows parents to track their children's learning by pre-lessons which measure and direct age to be measured and also free space. These packages cost \$39.95 each. For more information, contact *Surekids Communications*, Pleasantville, New York, NY 10570.

Sometime I haven't done for a while to describe some new and interesting products on the marketplace. So, I will use the rest of the week's column to do just that. Way to go *Surekids Books*! Surekids like a famous *watchful*, always at *Ward*, is really in a *wise*, *spontaneous* and *interesting* *adults* *program* *model* to run an *the* *Commodore* 64.

ArtPark Software, publishers of the program, have submitted the entry deadline as a pre-qualification, they have been running a push this product. Their Computer Song Writing Contest deadline is now 1 December 1982.

The programmers/teachers who enter the best song on the Commodore 64 using *Surekids 64* will win \$1000 plus free time inside an actual recording studio. Judging the contest will be a *no-patron* panel of music professionals. An award must be submitted on disk.

If you would like more information about the program and/or the contest, write to Computer Song Writing Contest, P.O. Box 103, Sun Valley, CA 91363, (800) 264-9640. Turn to page 107.

Tired of hokey old black and white pictures, but can't afford a colour *camera/processor*? *Surekids* may just have *revolutionized* the solution of your problem with its new *CD-3500* *four-colour* *camera*.

The user has black, red, green and red pose, each of which can be programmed separately. The maximum pose width is 8.2 mm for excellent detail. When printing alphabetical characters for four steps per step mode, the characters would be printed 8.2 by 1.2 mm. The user can handle paper up to 1.2 inches wide and can plot on paper down to the size of the average *personal* *stationery* art work on *magazines*. A suggested cost \$24.95-24.95 and *Commodore* interface and *driveline* can be chosen by just about any computer manufacturer.

It has certain tools to *explore* too, such as circle, point, and *area* *calculator*, all of which can be programmed and addressed from BASIC.

As if that's not enough, *Surekids* *Keychart* is bundled in with the *camera*. This program is designed for use in graphics publications. It is *multicolored* and uses a full on the *Amiga* *Screen* to produce different types and ways of charts. Surekids has conducted any number of *graphical* publications so that the *charts* can be commonly supported. Best of all, this amazing machine creates a *magazine* and the price of a mere \$1995.

For more details, contact your local *Surekids* dealer or write to *Surekids Electronics Corp.*, Systems Division, 10 Sheep Plaza, Pleasantville NY 10570, (800) 264-9640.

Wall Street C

How it works

- 100 FORE Stock screen and history option
- 101 DEM Stock value of securities
- 102 regular variables
- 103 initialize random board
- 104 read stock value data
- 105 INPUT initial credit, value of stocks, stock purchase cost
- 106 PRINT display stock value code
- 107-110 calculate stock market average and change
- 108 check to end of session
- 120-122 DEM Stock purchase price function
- 123 position and value read
- 124 add overall earnings
- 125 stock purchased with cash
- 126 new holdings
- 127 add to day
- 128-132 initialize new stocks screen, random number of days, an element of previous stock values
- 133-139 move loop to change stock values and calculate the stock return changes
- 138-139 change sign of trend after 10 days
- 140-144 change price and length of term randomly
- 145-146 stock and request
- 150-154 display cash and stock assets information
- 155-156 move display with request going, stock name, value, value all stocks created and stock price change
- 160-161 stock, printed with information
- 162-163 print the total share price
- 164-165 print space code
- 166-167

see the greenbacks tumble in this game by Sean Conway.

We're talking big bucks

Do you have a desire to be the stock market? But don't have enough cash to start? Here's the answer to your dreams — a stock exchange game you

Variables

- 50 total cash starts
- 51 total cash ends
- 52 total assets
- 53 total company cash ends
- 54 purchases for day
- 55 value for day
- 56 total value of transactions
- 57 fee for broker
- 58 days
- 59 change in value of stock
- 60 value per share of stock
- 61 stock control
- 62 transaction fee stock
- 63, 64, 65 London stock market averages
- 72 stock board
- 73 gain of greatest board + or -
- 74 number of merge need
- 75 stocks to set if same cycle is possible
- 76, 77 greatest large change in stock value
- 78 stock to change in LS large change
- 79 stock value
- 80 stock change three days (1)
- 81, 82 closest to stock value after random numbers of days

can play in the comfort of your own home without leaving any money.

Wall Street is a stock market simulation for the unexpanded VIC-20. It consists of two parts. The first is an editor of the game and instructions and the second part executes the main program.

You are deal in five stocks and play class swap, not drugs, prostitution and embezzlement. You start with \$1000 cash and your objective is to update the key figures and selling stocks at the right time. As a real life, market trends can change suddenly and unexpectedly, and you could find yourself losing your shirt.

On running the game you are given the current share prices followed by the exchange average. Then you'll see a movement of current assets, cash and stock.

Now make your transactions. If you want to sell stock, make a number to be sold a negative. When you do this, it's reading ends you are given a status report of the number of shares held, the present value of your holdings and the change in value of each stock, since close of business the previous day.

You need not type at part 1 if you don't require it, but it may prove useful in the future when you decide to run previously saved programs.

Your gains aren't all yours; you have to pay 2.5% to your broker on the total value of your stock holdings. Good luck, keep your eyes open and your ears shut you.

What are conventions?

This program should convert easily to most computers. All that will need changing is the screen display layout, which is suited to the VIC-20's small screen.

Graphics on the program are as follows:

FORE EDITOR gives stock screen and broker.

FORE EDITOR screens covered.

FORE EDITOR screens unprice will.

Control characters to remember when converting are as follows:

101 all lowercase

102 cursor down 1 line

103 cursor right 1 space

104 print on screen

105 print on card

106 horizontal screen, refer to line 110 print on screen

107 scroll down

108 scroll up

109 reverse mode on

110 reverse mode off

COMPUTER MODELLING

Computer games are a lot of fun, but there isn't always much to show for your efforts when it's time to pull out the plug. But you can use digital technology to make something you can keep and be proud of — computer controlled models.

Digital electronics have gone beyond being something you plug into the TV. Now you can use them to operate a real working model layout. Model railways aren't for kids anymore, and we've got the magazine to show you why.
YOUR MODEL RAILWAY — only 80p

Out Fri. Sept. 21st

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

- 1 You have not received the goods or had your money refunded, and
- 2 You write to the publisher of the publication complaining of the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us when you write, we will tell you how to make your claim and what evidence of payment is required.

The guarantee is not valid against claims made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent or a limit of £1,000 per annum for any one advertiser so affected and up to £5,000 a maximum of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been completed within 28 days of the date of this publication, but we do not guarantee to do so in view of the need to set aside funds to the government and to learn quickly of readers' difficulties.

This guarantee covers only advance payment made in direct response to an advertisement in this magazine (not for example, payments made in response to catalogues, etc received as a result of answering such advertisements).

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print on posters or in the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaint.

If you're not sure about which ones they are however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then if an advertisement bothers you you'll be justified in bothering us.

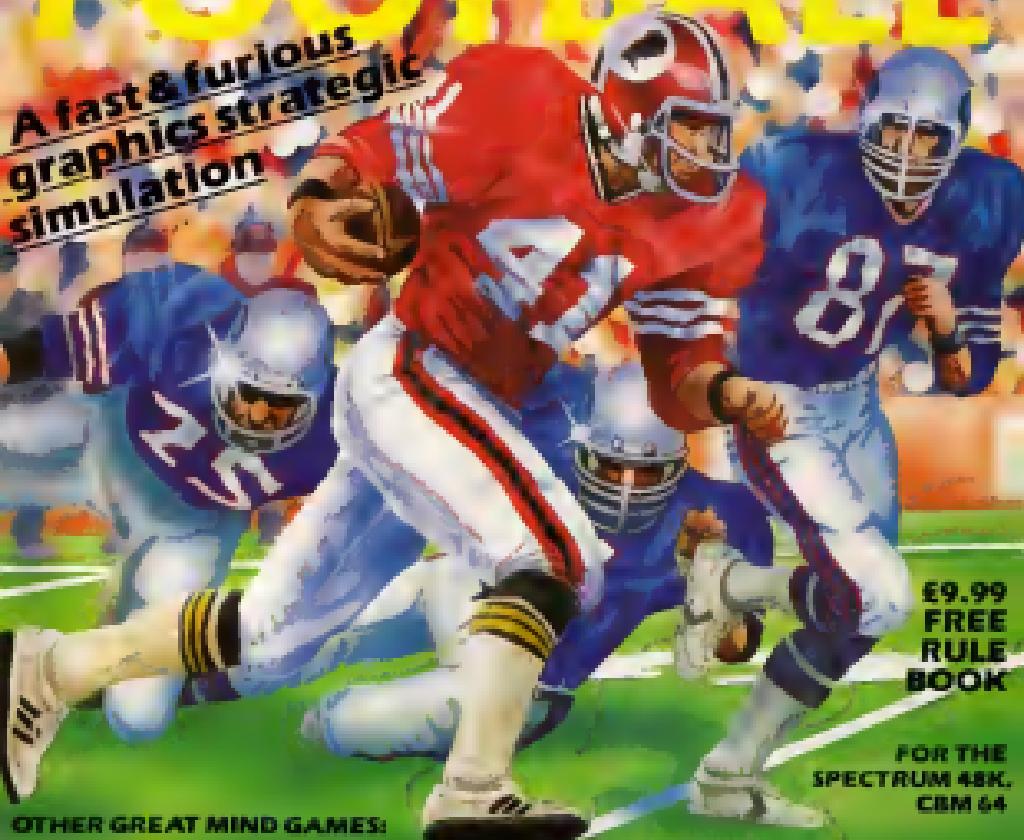

The Advertising Standards Authority. If an advertisement is wrong, write here to put it right. ASA Ltd, Dept E, Brook House, Bromsgrove Road, London NW1 1HY.

1% of our budget is directed to the support of high standard advertising.
